

SUMMARY:

- Having **4+ years** of Java Full Stack Developer experience with OOPs, Java/J2EE technologies and all phases of the Software Development Life Cycle (SDLC), including design, SCRUM, development, testing, and deployment of web-based and enterprise business applications.
- Solid grounding in coding principles and the ability to develop RESTful multi-tier apps using **Java, JavaScript, GIT, GitHub, APIs, object-oriented programming, design patterns, Frameworks, CSS, version control (Git), building tools, Spring MVC, Spring Boot, Hibernate, Spring AOP, Angular4/6/8/12/16/18, React, Kafka, Jenkins, OpenShift technologies, Docker, Ansible, and AWS.**
- Solid understanding of Java/J2EE design patterns including **MVC, Singleton, Factory, Session Façade, and Delegate pattern Servlets, JMS, Spring, and JSF My Faces, Rich Faces, Ice Faces, Prime Faces, and JPA, JAX B.**
- Hands-on experience with CI/CD pipelines using Jenkins, GitHub Actions, and Terraform for infrastructure automation.
- Proven expertise in the construction of user interfaces for the web utilizing **HTML5, ANGULAR JS, REACT JS, VUE.JS, XHTML, DHTML, CSS3(SAAS/LESS), Bootstrap, JavaScript, JQUERY and AJAX.**
- Good Expertise in analyzing the Document Object Model (DOM) Layout, DOM Functions and Java script functions, cascading styles across cross browser using Fire Bug, Developer tool bar.
- Experience in using React.js components, Forms, Events, Keys, Router, plus Redux, Animations and flux concept. Expertise in React.js for creating interactive UI's using one way data flow, virtual DOM, JSX, React Native concepts.
- Broad knowledge of Core Java concepts like Streams API, Lambda Expressions, Multithreading, Transaction Management, Exception Handling, and Collection API.
- Hands on Experience in writing PL/SQL optimization, creation of complicated stored procedures, joins, and views for database objects in Oracle, MySQL, MS SQL Server, and MongoDB.
- Experience in creating build scripts using Maven, Gradle and writing Docker files for creating Docker images and then deploying the Docker containers onto AWS EC2 instances.
- Good knowledge on **Amazon Web Services (AWS), Amazon Cloud Services** like **Elastic Compute Cloud (EC2), Simple Storage Service(S3), Amazon Simple DB, Amazon Cloud Watch, SNS** and experienced in building highly scalable java applications using various architectures.
- Excellent Expertise in Amazon Web Services (**Amazon S3, Amazon EC2, Amazon SQS, Amazon Simple DB, Amazon Elastic Load Balancing, Amazon EBS, Amazon CloudFront, and Amazon Lambda**).
- Excellent working experience of the Spring Framework's various modules, including Spring Core Container Module, Spring Application Context Module, **Spring MVC Framework Module, Spring Boot, Spring AOP Module, Spring ORM, and Spring JDBC.**
- Object-oriented JavaScript libraries were used to build the reusable service components using **Angular 2/5/6/7/8/12/16/18, Vue.js, Reac JS, and Node.js services.**
- Implementing SOAP services with Axis-2 and Apache CXF while working on WSDL and WADL (JAX-WS frameworks).
- Implemented security features Secure authentication with LDAP, OAuth 2.0, Spring Security, SSL, and SiteMinder (SSO), OAuth2 for creating tokens in the application using Spring Security, and JWT for providing tokens.
- Implemented authentication to web services using OAuth 2.0 and Spring Security and worked with Spring Cloud Config and Apigee API-gateway in the Spring Cloud to provide weighted load balancing based on numerous criteria like traffic and resource utilization (User Access Management).
- Used Spring Boot to develop Micro Services extensively, and Swagger to produce dynamic documentation for RESTful web services.
- Developed HQL queries for data access and used Spring Boot to integrate Micro Services with Hibernate ORM.Experience in testing knowledge of the Mockito-based JUnit Framework.
- Thorough knowledge of Selenium-based integration testing and Java-based automated behavioural testing of applications.

- Jenkins CI/CD pipeline was used to integrate the code repository and automate the deployment process.
- Using Jenkins with GitHub to establish a continuous integration (CI) and continuous deployment (CD) pipeline using Docker container services to deliver the applications.
- Solid understanding of managing Kubernetes clusters and Docker containers on the OpenShift platform.
- Maintained code repositories using various version control tools like **GIT, GIT LAB, SVN, CVS, Bit Bucket and Bamboo.**
- Working experience using Splunk, ELK as monitoring tools and Redis cache as a Caching service.
- Working experience using NATS java client for publishing and consuming messages.
- Experience working with Microsoft Azure services like **Azure ARM Templates, Azure SQL Database, Virtual machines, Azure Active Directory, Azure VPN Gateway, Azure Fabric, Azure search, App services, Notification hub, Cosmos DB.**
- Used message-oriented middleware such as **Apache Kafka, Active MQ, Rabbit MQ, and IBM MQ to coordinate applications.**

Technical Skills:

Programming Languages	Java (11/8/7/6), C, C++, C#, PL/SQL, Python.
Java/J2EE Technologies	JSP, JSTL, Servlets (3.1,3.0), JDBC, EJB, Java Beans XSD, JAX-RS, JAX-WS, SOAP, WSDL, Axis, Apache CXF, Java Security.
Micro Services	Spring Boot, Rest API, Spring Core, Spring Integration, Spring Security.
Frameworks	Struts 2.0/1.0, Hibernate 4.x/3.x, Spring 3.0, Spring Batch, Spring Security, Spring AOP, Spring Core, JSF, Spring IOC, Spring Boot, React JS, Angular JS.
Web Technologies	Servlets, JSP, JavaScript, HTML5, CSS3, jQuery, AJAX, JSON, DOJO, Node.JS, React.JS, Angular.JS, Bootstrap, Ext.JS, XML, XSL, XSLT, SAX, DOM, XML Beans and JAXB
Database	SQL Server, MySQL, Oracle, MongoDB, Cassandra, CouchDB, Dynamo DB and Graph DB, PostgreSQL.
Web Services	Oracle SOA, RESTful, SOAP, UDDI, and WSDL.
Messaging	Rabbit MQ, IBM MQ, Apache Active MQ, Apache Kafka, and JMS (Java Message Service)
Application/ Web Servers	Apache Tomcat 8.0/7.x/6.x, IBM WebSphere 8.x/6.x, Oracle WebLogic 10.x/9.x, WebLogic, IBM WebSphere, Apache Tomcat, and JBoss
Design Patterns	Singleton, Business Delegate, Data Transfer Object, Façade, Data Access Object, MVC, Filter.
Methodologies	Waterfall, Agile, OOAD, and SCRUM
Testing Tools	Selenium, Log4J, JUnit, Mockito, Karma, and Mocha
Version Control	Bitbucket, SVN, CVS, GIT, and GIT LAB
IDEs	Eclipse, Net Beans, IntelliJ, Spring Tool Suite, Android Studio, Visual Studio, RAD.
Operating Systems	Windows, Unix, Linux, Mac OS
Cloud Technologies, DevOps Tool & Others	AWS, EC2, Pivotal Cloud Foundry (PCF), GCP, GKE, Azure, Docker, JIRA, Log4j, Splunk, Redis, NATS, Bitbucket, Bamboo.

PROFESSIONAL EXPERIENCE:

Walmart, Andover, MA

Jun 2024 – Till Date

Sr. Java Developer

Responsibilities:

- Led modernization of **legacy Java 1.8 applications**, migrating components to a cloud-native architecture using **Spring Boot, RESTful APIs**, and **AWS ECS**.
- Refactored and rebuilt legacy services for **cloud compatibility**, improving performance, maintainability, and scalability.
- Designed and implemented robust **CI/CD pipelines in Jenkins**, integrating automated builds, unit tests, and deployments across multiple environments.
- Built secure, token-based APIs for debit card updates and payment workflows, remediating **legacy security vulnerabilities** using **Spring Security, OAuth2**, and **JWT**.

- Developed **event-driven Kafka** consumers/producers to enable seamless asynchronous communication between microservices.
- Containerized services using **Docker**, managed infrastructure with **AWS IAM, VPC, Security Groups**, and deployed apps to **AWS ECS/Fargate**.
- Monitored system health using **AWS CloudWatch**, and configured **Kibana dashboards** and **Splunk logs** for real-time visibility into system behavior.
- Provided **rotational on-call production support**, responding to critical issues via **PagerDuty**, achieving 99.9% uptime SLA.
- Collaborated across DevOps, QA, and product teams to understand system dependencies, streamline integrations, and document end-to-end data flows.
- Wrote **unit tests with JUnit and Mockito**, and integrated **SonarQube** for code quality analysis in the CI pipeline.

Environment: Java 1.8 & 11, Spring Boot, REST APIs, Kafka, Angular 8, React.js, AWS ECS, IAM, VPC, CloudWatch, Jenkins, Docker, JUnit, Mockito, GitHub, Postman, SonarQube, Kibana, Splunk, Agile, CI/CD, OAuth2, JWT, Spring Security

Takeda Pharmaceuticals (Remote), MA

November 2023 – May 2024

Senior Java Developer

Responsibilities:

- Led modernization of a **Java 1.8 monolithic healthcare platform** into a modular **microservices architecture** using **Spring Boot, REST APIs, and Hibernate**, improving maintainability and deployment agility.
- Refactored legacy components for **cloud readiness** and migrated backend services to **AWS**, utilizing **EC2, S3, RDS, IAM, VPC, and Auto Scaling** to support high availability and secure deployments.
- Engineered **CI/CD pipelines using Jenkins**, automating builds, test executions (JUnit, Mockito), and deployments to cloud environments.
- Developed **secure RESTful APIs** for clinical workflows and patient data, integrating **Spring Security, OAuth 2.0, and RBAC** to meet HIPAA compliance and internal security guidelines.
- Implemented **end-to-end monitoring** using **AWS CloudWatch**, setting up alarms and metrics for error tracking and performance optimization.
- Rewrote legacy SOAP services as RESTful endpoints while maintaining backward compatibility via **WSDL/XML** for regulatory and downstream system support.
- Utilized **RabbitMQ** for asynchronous messaging between services to ensure responsiveness and improve fault tolerance under peak load conditions.
- Supported front-end modernization efforts by developing reusable **React.js** components and integrating with backend microservices for real-time data exchange.
- Collaborated with architects, QA, and DevOps in Agile sprints to decompose legacy services, define integration points, and document data flow between legacy and cloud-native components.
- Integrated data layers using **PostgreSQL, MongoDB, and PL/SQL**, leveraging **Spring Data JPA** for consistent and optimized persistence.

Environment: Java 1.8 & 11, Spring Boot, REST APIs, Hibernate, Jenkins, OAuth2, JWT, Spring Security, AWS (EC2, S3, IAM, VPC, CloudWatch), RabbitMQ, ReactJS, Redux, JUnit, Mockito, PostgreSQL, MongoDB, Agile, CI/CD, SOAP, WSDL/XML

Client: TransAmerica (Remote), NY

December 2022 – October 2023

Full Stack Java Developer

Responsibilities:

- Played a key role in developing a secure and scalable **customer onboarding and account management platform** for one of the leading financial services providers, adhering to **Agile Scrum methodologies**.
- Designed and implemented **Spring Boot-based RESTful microservices** to handle customer registration, transaction history, and secure profile updates, ensuring high availability and smooth third-party integration.
- Built modern, responsive, and real-time **single-page applications (SPAs)** using **React.js** and **Redux**, enabling seamless multi-step forms, real-time validations, and customer interactions.
- Integrated with **OAuth 2.0** and **OIDC** for secure, token-based authentication and SSO, ensuring enterprise-grade access control across all frontend and backend services.
- Utilized **Apache Kafka** to build event-driven architecture for asynchronous service communication, improving scalability and system decoupling under high transaction volume.
- Handled backend data management using both **MySQL** (for structured financial data) and **Cassandra** (for distributed analytics and time-series logs), optimizing performance through proper schema design and indexing.
- Deployed microservices using **Docker containers**, managed orchestration through **Azure Kubernetes Service (AKS)**, and automated pipelines with **Jenkins** and **Azure DevOps**, accelerating time-to-market and rollback safety.

- Implemented **Azure Blob Storage** and **Azure API Management (APIM)** to manage secure API exposure and storage integration for transactional documents and reports.
- Integrated **Elastic Stack (ELK)** and **Azure Application Insights** for real-time logging, performance analytics, and troubleshooting across environments.
- Practiced **Test Driven Development (TDD)** with **JUnit**, **Mockito**, and **Selenium WebDriver**, ensuring high test coverage and functional UI reliability.
- Collaborated with cross-functional teams using **JIRA** and **GitLab**, contributing to code reviews, release planning, and production incident resolution with strong debugging via **Log4j**.

Environment: Java 11, Spring Boot, REST APIs, React.js, Redux, PL/SQL, Apache Kafka, MySQL, Cassandra, Azure AKS, Azure Blob Storage, Azure APIM, Jenkins, Docker, OAuth 2.0, OIDC, Kubernetes, JIRA, GitLab, JUnit, Mockito, Selenium, ELK Stack (ElasticSearch, Logstash, Kibana), Agile Scrum

Client: Onivart | INDIA

Jan 2021– July 2022

Associate Software Developer

Responsibilities:

- Contributed to **legacy system modernization** by migrating monolithic services to a **microservices architecture** using **Spring**, **Hibernate**, and **REST APIs**, improving scalability and modularity.
- Designed backend logic using **Core Java**, **J2EE**, and **Spring IoC**, implementing reusable components to support evolving business features in internal financial systems.
- Developed and consumed **SOAP-based web services** using **JAX-WS** and **Apache CXF**, ensuring reliable communication between distributed enterprise modules.
- Used **Struts**, **JSP**, and **JSTL** to build and maintain presentation layers, integrating front-end functionality with backend services.
- Refactored and restructured services into RESTful APIs, and implemented **ORM with Hibernate/JPA**, using **HQL** and **Criteria API** to optimize MySQL data operations.
- Employed **Java multithreading** techniques for backend batch job performance tuning, enabling efficient nightly data synchronization across systems.
- Built dynamic UI components with **AngularJS**, **jQuery**, and **AJAX**, supporting real-time validation and responsive content rendering.
- Deployed applications to **JBoss** using **Ant build scripts**, configured logging with **Log4j**, and participated in database and service call **performance tuning**.
- Gained **cloud experience on Google Cloud Platform (GCP)**, working with **Compute Engine**, **Cloud SQL**, **Cloud Storage**, and monitoring with **Stack driver**.
- Followed **Test-Driven Development (TDD)** practices with **JUnit**, and created component tests for Action classes using Struts Test Cases.
- Automated data transfer and batch processes using **UNIX shell scripting**, enhancing reliability of system integrations and back-office operations.
- Created **UML diagrams** (Use Case, Class, Sequence) for planning and documenting system components and workflows.

Environment: Java 8, J2EE, Spring, Struts, Hibernate, REST, SOAP, JAX-WS, Apache CXF, AngularJS, JSP, JSTL, AJAX, MySQL, JBoss, Ant, Log4j, JUnit, GCP (Compute Engine, Cloud SQL, Stackdriver), Shell Scripting, UML, TDD.
